

Avigilon™ Control Center 5 Release Notes for Integration with Lenel OnGuard 2013 (6.6)

Lenel OnGuard Video & Event Viewer 5.6.0.12 – Released August 18, 2015

Release Summary

This integration version provides an update to version 5.0.0.52 to fix a performance issue when the integration is run on a system with a large number of virtual matrixes and saved views. It is not required for systems that are not experiencing a problem.

New Features & Issues Fixed

- Fixes a performance issue when used with a large number of virtual matrixes and saved views.

Supported versions of ACC

- ACC 5.6 and later

Supported versions for Lenel OnGuard:

- Lenel OnGuard 2013 (6.6)

Known limitations

1. DirectX June 2007 (the installation package is part of the Add-on) must be used with Avigilon DVR. Other versions of DirectX will not allow software to function.
2. Play speed: Playing at speeds greater than 8x may cause the video to be displayed in bad quality.
3. It is recommended to configure playback pre-roll and playback post-roll to 30 seconds when using 'dual video on launch' feature. Playback Pre-roll and Post-roll can be configured per channel in System administration.
4. When stopping a PTZ Tour, it will take a couple of tour cycles before the tour will actually stop running.
5. Camera logic IDs must be less than 32768 when defining cameras in the Avigilon Control Center.
6. No Communications Restored events for the recorders are displayed in Alarm Monitoring after restarting the Communications Server. The events are available of the historical trace of the recorder. Note that all the devices come back online as expected.
7. For Bosch VG5 700 PTZ camera the zoom functionality is not supported when connected as an ONVIF camera.
