

# Using ACC and ACM Together for a Complete Security Solution

## Interoperability between Avigilon Control Center (ACC) Video Management Software and Avigilon Access Control Manager (ACM) System

### Review ACM Door Events and Credentials

ACC<sup>TM</sup> software receives, processes and acts on ACM<sup>TM</sup> door events and hardware input events. Identity Verification feature dynamically displays ACM credentials with ACC camera views, allowing you to remotely grant door access.

Identity Search corresponds ACM credentials with Avigilon Appearance Search<sup>TM</sup> results, offering a new way to locate individuals across an entire site or multiple sites connected to the same ACC Client.

VIDEO SURVEILLANCE

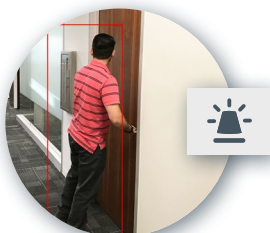

### H4 Video Intercom Support

The H4 Video Intercom enables operators to monitor and control access at entry points through two-way audio communication, video verification and the ability to send an ACM door grant through ACC.

ACCESS CONTROL

### Bi-Directional Alarm Management

ACC alarms work together with ACM alarms including panel/subpanel, input/output, identity and door-related events, allowing you to acknowledge them through either ACM or ACC. The Alarm Gateway Service can be configured according to project requirements.
