

Avigilon Appearance Search™

Avigilon Appearance Search video analytics technology is a sophisticated search engine for video data. It sorts through hours of footage with ease, to quickly locate a specific person or vehicle of interest across an entire site.

Avigilon Appearance Search technology can dramatically improve incident response time and enhance forensic investigations by allowing operators to build robust video evidence and create a powerful narrative of events.

KEY FEATURES

Quickly search for a person or vehicle of interest

Refine searches based on time and camera location

Playback, bookmark and export tools

Self-learning video analytics-enabled

Integrated with Avigilon Control Center (ACC) software

BENEFITS

Enables operators to quickly comb through hours of recorded footage, efficiently grouping video data to help track a vehicle or individual's route, identify a previous and last-known location and assist investigations.

Accurately provides results relevant to the time and place of an event.

Allows the flexibility to simultaneously compile a comprehensive set of video evidence from multiple video sources.

Works with Avigilon video analytics cameras to generate, record and classify video data for effective searches.

Provides advanced video search capabilities to enhance the user experience of the complete Avigilon solution.
